

# Prototype quick guide

From a complete onboard session to a driver-ready briefing

01

## CUT LAPS

### CREATE CLEAN LAP CLIPS

Load one full session, mark finish-line crossings and generate individual laps.

02

## COMPARE

### REVIEW TWO ONBOARDS

Synchronize reference and comparison laps, then record time-coded engineering notes.

03

## BRIEFING

### TEACH AND VERIFY

Turn circuit knowledge into visual study material and a perfect-score retention test.

### WHAT THIS DEMO PROVES

**A single local workspace can prepare video, compare performance and improve driver retention before the car goes on track.**

Barcelona data is illustrative. Circuit maps, corner points, photos, tyre procedures, reminders and test questions are fully configurable. Onboard files remain on this computer.

# Turn a full session into individual laps

Use precise crossing marks instead of manually trimming every lap.

1

## Load the complete onboard

Drop the full session or choose the video file.  
The media stays local.

2

## Find the first crossing

Use playback, 5-second jumps, frame stepping  
and the precision strip.

3

## Mark every next crossing

Each consecutive pair automatically becomes  
one complete lap.

4

## Use the created lap

Open it in Compare, preview it or download a  
clean lap copy.

### OUTPUT

Named, reusable lap clips ready for  
analysis.

TRIDENT ONBOARD

Compare 0

Briefing 0%

**Drop a complete onboard session here**

The video stays on this computer. Nothing is uploaded.

Choose video

# Review two onboard laps side by side

Created laps and ready-made lap videos can be used in the same comparison.

- 1 **Choose both laps**  
Assign a reference lap to Slot A and the comparison lap to Slot B.
- 2 **Align the timing**  
Set start, end and sync offset so the same track event matches on both videos.
- 3 **Inspect the difference**  
Play together, scrub, step frame by frame and select audio, speed or loop.
- 4 **Capture engineering notes**  
Add a note at the current time, classify it and save the review.

## OUTPUT

Synchronized evidence plus time-coded driver feedback.

# Convert team knowledge into driver actions

Three clear modes separate the reference, content creation and driver experience.

## 1 Barcelona example

### REFERENCE

A completed sample that demonstrates the intended structure and level of detail.

## 2 Team editor

### BUILD

Upload a map, create and drag points, edit warm-up, reminders, photos and any number of questions.

## 3 Driver view

### STUDY

A clean briefing for learning, marking progress and launching the timed mini-test.

**TEST RULE** All questions are completed before the result appears. Any error remains unidentified and resets study progress; only 100% clears the driver.

KEY POINT New point 4 Mark learned

Circuit - needs driver confirmation

BRAKE Add reference MIN SPEED Add speed GEAR Add gear

MEMORY CUE Add a short memory cue.

TYRE / ENERGY Add tyre or energy guidance. COACH NOTE Add the coach note.

PHOTO REFERENCE T1 visual references

**TYRE WARM-UP**  
Out-lap rhythm

1 Build brakes Two firm stops before sector 2, no panic lock.

2 Front axle Progressive steering load through long corners.

3 Push window First push lap only when fronts answer at turn-in.

4 New point Add the instruction for the driver.

**BEFORE DRIVING**  
Must remember

First push lap only when the front

S1 Ne... T1 Ne... T2 Ne... T10 Ne...

# Build the challenge, then measure recall

The briefing becomes a timed knowledge check that rewards complete and fast preparation.

1

**Publish race data**  
The engineer prepares every circuit reference the driver must study.

2

**Create questions**  
Write any number of questions, choices and the correct answer.

3

**Driver studies**  
The driver reviews the complete briefing before launching the test.

4

**Pass at speed**  
Only 100% passes; the final time becomes the team benchmark.

**FAIR CHALLENGE** The result appears only after the final question. If any answer is wrong, the mistake and correct answer remain hidden: study again and restart from zero.

ENGINEER: EDITABLE QUESTION BANK

MINI-TEST BUILDER

Question bank

Add question

Questions can cover corners, warm-up, procedures or any topic in the briefing.

1

TOPIC

T1

QUESTION

What is the key reference for T1 braking?

ANSWER A

100 m board

ANSWER B

Start of outside kerb

ANSWER C

Pit exit line

CORRECT ANSWER

Answer A

2

TOPIC

T3

QUESTION

What is the main tyre risk through T3?

ANSWER A

Overheating the front-left

ANSWER B

Cooling the rear tyres

ANSWER C

Missing brake temperature

CORRECT ANSWER

Answer A

3

TOPIC

T5

QUESTION

What should the driver avoid in T5?

ANSWER A

Rushing the apex

ANSWER B

Using the bridge shadow

ANSWER C

Braking in a straight line

CORRECT ANSWER

Answer A

4

TOPIC

T10

QUESTION

In T10, what matters more than entry speed?

ANSWER A

Rear traction on exit

ANSWER B

Maximum steering angle

ANSWER C

Shortest brake distance

CORRECT ANSWER

Answer A

5

TOPIC

T14

QUESTION

Why is T14 important in qualifying?

ANSWER A

It launches the main straight

ANSWER B

It cools the front tyres

ANSWER C

It sets the pit-lane delta

CORRECT ANSWER

Answer A

6

TOPIC

New topic

QUESTION

Write the question here.

ANSWER A

Correct answer

ANSWER B

Alternative B

ANSWER C

Alternative C

CORRECT ANSWER

Answer A

DRIVER: FULL-SCREEN TIMED TEST

circuit plan

Question 1/6 00:00.2 Exit test

T1

What is the key reference for T1 braking?

100 m board

Start of outside kerb

Pit exit line

Choose carefully. Correct answers are not revealed after a mistake.
